

CLAIMS

1. Crystal (1) in particular for a telephone watch including a keyboard (2) formed in particular of a plurality of capacitive sensors (3) disposed under a lower face of the crystal, characterised in that it includes a thick zone (4) and a thinned zone (5), the keyboard (2) being deposited under the thinned zone (5).
  - 5 2. Crystal according to claim 1, characterised in that the thick zone is disposed at its centre and in that the thinned zone is disposed at its periphery.
  3. Crystal according to claim 1 or 2, characterised in that it is round and in that the thinned zone (5) forms a ring under which the keyboard (2) is deposited.
  4. Crystal according to any of claims 1 or 2, characterised in that the keyboard (2) includes a first decorative opaque layer (6) formed of numbers (7) and signs (8) and deposited directly under the thinned zone (5), and a second layer (9) deposited under the first and formed of a plurality of conductive pads (3), a conductive pads (3) corresponding to each number (7) or sign (8), said conductive pads being individually connected to a printed circuit (12).
  - 10 5. Crystal according to any of claims 1 or 2, characterised in that it is secured onto a bezel (10) including an inner reinforcement (11) extending under the thinned zone (5) of the crystal (1), the keyboard (2) being sandwiched between said thinned zone and said reinforcement.
